

ENAR[®]
Therapy System

RMIT UNIVERSITY ENAR RESEARCH STUDY RESULTS

Phase 4 Post-Market Surveillance Study of 481 Case Reports

Amplify Your Therapeutic Ability

- **RELIEVE PAIN FAST** - acute & chronic
- **IMPROVE FUNCTION** - reduce disability
- **REHABILITATE RAPIDLY** - better, faster
- **IMPROVE GENERAL HEALTH** - wellness
- Treat your self better with **ENAR[®]**
- See a trained **ENAR[®]** Therapist

Where does ENAR work?

2014 University ENAR study*

Treated by Therapists and Self-Users

	Count
Other Head	12
Headache	16
Neck*	56
Shoulder*	60
Cardiovascular	6
Thoracic spine*	14
Elbow*	9
Digestive	13
Low Back*	111
Hip*	22
Genito-Urinary	3
Wrist/Hand*	14
Neurological	31
Fibromyalgia*	25
Arthritis*	25
Skin	8
Hormonal	6
Ankle/Foot*	27
General Health	4

Survey Count N 481

Average: **Pain Reduction 70%**

Functional Improvement 62%

RMIT JEB CAM Published 2014*

RMIT JEB CAM

The ENAR ® is a hand-held, Electro-Neuro-Adaptive-Regulator, approved by the TGA (147761) Class IIa therapeutic medical device purposed for both pain relief and functional improvement. ENAR is used by medical professionals, trained ENAR therapists, & personally by patients and home users.

The ENAR is applied onto the skin, often centrally along the spine first, then adjacent to and onto your areas of pain. Micro-electro tingling is felt as the ENAR is adjusted for comfort and then the ENAR is brushed over the skin to find and treat your 'Key-Points'.

Key-Points "These areas of difference are often where normal homeostasis is not fully present, or optimal. ENAR signals help the body prioritise and amplify communication from the sensory nerve endings of the peripheral nervous system (PNS). This input is processed in the brain, which initiates a reflex response, transmitting the new information through the central nervous system (CNS) to muscles and glands to co-ordinate and regulate responses. Slower acting chemical messengers, such as hormones and neuropeptides are also stimulated which effect more long term changes in physiological activities and result in pain relief." Prof. Dr. Arun Aggarwal Syd Uni Pain Specialist

How well does ENAR work?

RMIT University - Phase 4 Post Market Surveillance Study ENAR Therapy System Case Results

Average treatment duration - 30 mins
(Number of treatments required varied)

481 patients reported ENAR case files showed significant results using ENAR device therapy for chronic pain.

Pain reduction average of 70%

Functional improvement avg 62%

ENAR Effects Lasted
Hours - 10%
Days - 30%
Months - 33%
Years - 23%

Overall Case Respondents - reported

"Better by Comparison" 92%

"Medication Reduced" 80%

"Great Effectiveness" 82%

* "92% of respondents rated ENAR as better than other types of therapy they had tried. **This represents a surprisingly high level of patient satisfaction.**"

Prof. Dr. Marc Cohen RMIT Uni & Prof. Dr. Rodney Bonello
